What went well

updated the functionality according to the last sprints results

Software bug fixing

implemented new mini features which were missing

More detailed reports on tasks

Making sure we understand what we want to achieve by doing meetings in online space

Doing manual testing and getting more knowledge on unit testing

Gaining more understanding on how Android Studio works
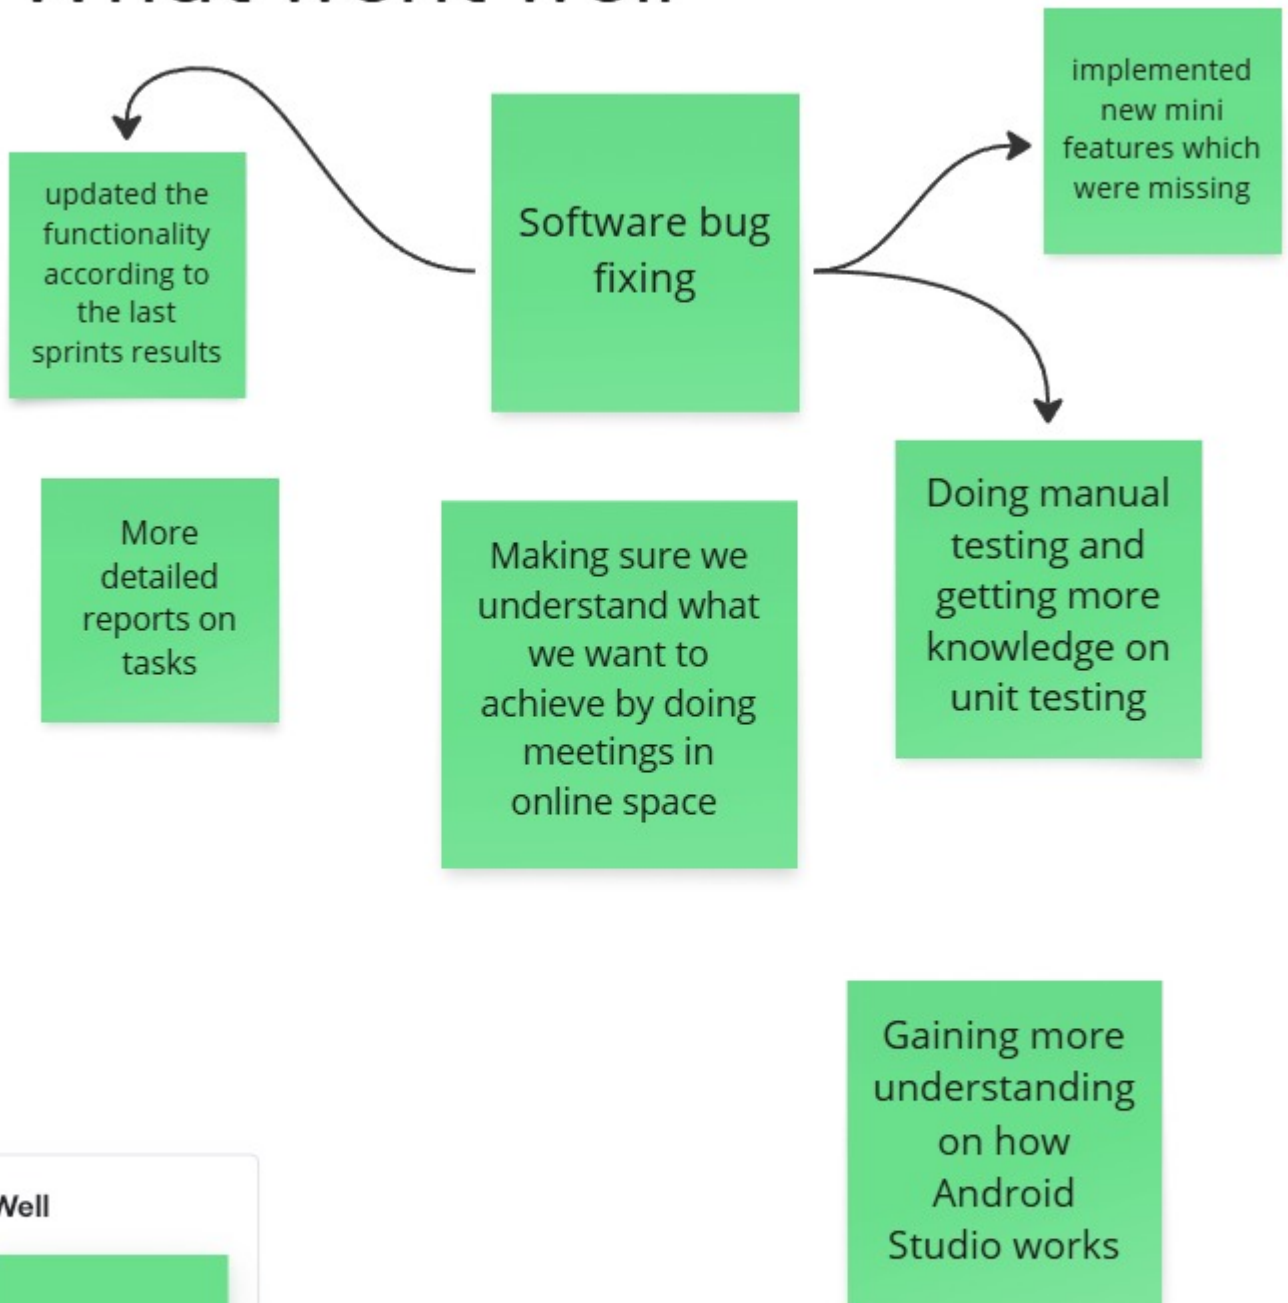

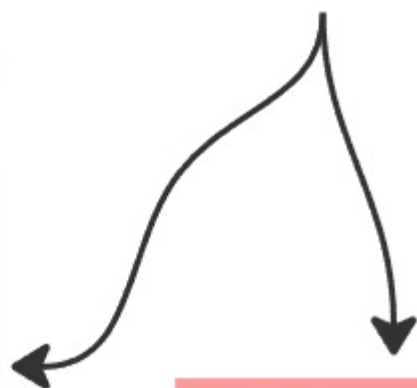

Well

What to improve

Need more effective branch making for better task management

Do not plan too much for one sprint

Even small bugs can cause huge problems - do not underestimate them

Plan accordingly by looking at other modules, tests

Better plan the progress of the app together

Failure

Actions for improvement

For at least three different tasks make three different branches

Best would be to make new branch for every new task if possible

Before starting a sprint team has to analyze all the obstacles for an hour

For half an hour team has to look through the moodle an AIS to know what other modules require to do for the next to weeks

For another half an hour team has to recognize the bugs and issues that has to be fixed or managed and has to analyze them for better understanding how long they are going to take to execute

Team needs to have at least 1 hour meeting in the start of the sprint so everyone participates and is onboard
